[Mac Os X Mount Raw Disk Image](#)

```
roland — less + man diskutil — 80x24
rename | renameVolume device name
Rename a volume. Volume names are subject to file system-specific
alphabet and length restrictions.

enableJournal device
Enable journaling on an HFS+ volume. This works whether or
not the volume is currently mounted (the volume is temporarily
mounted if necessary). Ownership of the affected disk is
required.

disableJournal [force] device
Disable journaling on an HFS+ volume. This normally works
whether or not the volume is currently mounted (the volume is
temporarily mounted if necessary). If the force option is
specified, then journaling is disabled directly on disk; in
this case, the volume must not be mounted. Ownership of the
affected disk is required.

moveJournal external journalDevice device
Create a 512MB Apple_Journal partition using the journalDevice
partition to serve as a journal for the volume device. For
best results, journalDevice should be a partition on a differ-
ent whole-disk than the volume itself.
```
